

Data Management SLA

Overview

A dedicated member of staff on-site or remotely for half a day per week (or can be tailored to suit your individual school needs), to provide a data management service for core information that directly populates your MIS and associated software. This service has been developed in order to respond to the increasing amount of work being placed on schools in terms of data management and to be responsive to the increasing necessity for high quality data.

We will work collaboratively with schools to help develop their MIS and facilitate effective data collection and analysis to meet each individual school requirements. Our aim is to support the roles and responsibilities of Head Teacher's and Governing Bodies through the provision of professional assistance, thus ensuring a school fully meet their statutory and MIS needs.
